

BUTYRAL-S

Indication:

Butyral-S is a liquid feed additive formulated to enhance gut health and prevent clostridial infections in livestock. It combines the gut-supportive properties of butyric acid with the antimicrobial effects of cinnamaldehyde and thymol. Butyric acid strengthens the intestinal lining and promotes nutrient absorption, while cinnamaldehyde and thymol provide strong anti-clostridial activity, helping to reduce the incidence of clostridial-related diseases such as necrotic enteritis. Butyral-S is ideal for use in poultry, swine, and ruminants, particularly during growth phases, periods of stress, and times of high clostridial infection risk.

Cow

Camel

Pig

Cat

Dog

Poultry

Benefits:

- **Anti-Clostridial Action:** Provides targeted protection against *Clostridium* species, reducing the risk of necrotic enteritis and other clostridial infections.
- **Gut Health:** Butyric acid enhances gut integrity, supports villi development, and improves nutrient absorption.
- **Antimicrobial Properties:** Cinnamaldehyde and thymol help control pathogenic bacteria, including clostridia, promoting a healthy gut microflora.
- **Stress Management:** Supports gut health during periods of stress, such as weaning, transportation, or illness, improving overall animal performance.
- **Palatability:** The synthetic flavors improve feed palatability, encouraging consistent intake.
- **Synergistic Effects:** The combination of butyric acid, cinnamaldehyde, and thymol provides comprehensive gut health support.

Package Sizes:

- 100 ml
- 1 liter
- 5 liters
- 25 liters
- 200 liters
- 1000 liters
